

ABSTRACT OF THE DISCLOSURE

[10] This present invention is an attachment for a skidsteer loader, backhoe or other work type vehicle that can be used to quickly form the skimmer box walls when building a swimming pool. This invention significantly reduces the time required to prepare the skimmer box. In addition, this invention improves the safety of swimming pool construction by eliminating this strenuous job for workers and the risk of potential injury while digging the skimmer box hole. This invention reduces the costs of building a swimming pool by reducing the amount of time workers are required in the construction process. In addition, material savings can be incurred by reducing the amount of gunite required in the swimming pool construction process
